Spray

Strong adhesion power
The unique development is a specially created ‘pearl-network’ that keeps the active substances homogeneous in solution and ensures that the product sticks firmly to the hoof. Spot-spraying on the hoof guarantees long contact time at a lower dosage. Adhesion is excellent even on wet skin or hoof. Using Intra Hoof-Sol Spray reduces the waste caused by run-off on the floor.

Strong adhesion power
In recent years, dairy farms have been looking for alternatives to replace or expand the foot bath method. Besides individual spraying sessions with a low-pressure Matabi sprayer or another automatic sprayer, whole-herd protocols have been gaining in popularity. The latter involve using sprayers in milking robots and milking parlors. Intra Hoof-Sol Spray is developed for use in all of these applications and works in all seasons.

The Intra Hoof-Sol Spray has the following advantages:

- **Ready-to-use** – no mixing required!
- **Early lameness detection** - more focus on hooves with weekly spraying sessions.
- **100 % clean solution** – each hoof gets product uncontaminated by the hooves of other cows.
- **Environmentally friendly** – good adhesion helps reduce product dosage and minimize run-off on the floor.
- **Safe to use** – no formalin, antibiotics, acids, or offensive smell.
- **Easy product detection** – the stickiness and the green color ensure that no hoof is accidentally omitted.
- **Optimum viscosity** – the good flowability of the product prevents blockages of the spraying nozzle.

The Matabi applicator is built of durable parts and has a consistent usage reputation. The use of the Matabi applicator or any automated sprayer is recommended for the best experience with the Intra Hoof-Sol Spray

We recommend using our Intra Hoof-Sol Bath in conjunction with the weekly spraying sessions to optimize hoof health management. Cows with lameness issues need special care and attention. Use a professional hoof trimmer to treat your animals before implementing a spraying and/or foot bathing protocol.

Ingredients:
- Copper and zinc minerals
- Aloe plant extract
- Skin care agents
- Special adhesion promoters
- Isopropanol

Available size:
- 20 litres

1. Do not dilute this ready-to-use product.

2. If necessary, rinse the hooves and interdigital spaces with water to enhance skin contact.

3. Apply Intra Hoof-Sol Spray on the back and in the interdigital spaces of the hind legs using the Matabi low-pressure applicator or any automated sprayer.

4. Use Intra Hoof-Sol Spray once per week. With initial application, twice per week is recommended.
